## Summary

Computer Engineering student at Mumbai University with diverse skills in Software, Web, and AI/ML Development. Proven track record of completing rigorous projects with practical applications, particularly in app development, web development, and GenAI systems. Equipped to leverage existing technical knowledge while deeply committed to continuous learning and innovation for business objectives.

## Education

**Don Bosco Institute of Technology, Kurla**

*B.E. in Computer Engineering*

- CGPA: 8.3

**2023 – 2027**

*Mumbai, India*

## Technical Skills

**Programming Languages:** C, C++, Python

**Web Development:** HTML, CSS, JavaScript, React, Node.js, Express.js, MongoDB, PostgreSQL

**App Development:** Kotlin, React Native

**AI/ML & GenAI:** NLP, Vector Embeddings, FAISS, LLM APIs (Claude, Groq/LLaMA), FastAPI, LangGraph, Tavily

**Tools & Platforms:** Git, GitHub, Streamlit

## Projects

**Arbitrates – Agentic AI Code Review System** | *Python, Docker, GitHub Webhooks, LLMs*

- Developed Arbitrates, an automated AI-driven code review system that analyzes pull requests for security vulnerabilities, code quality issues, and rule violations using a multi-agent architecture.
- Designed an agentic pipeline where specialized AI agents collaboratively review code, leveraging a multi-modal knowledge graph of the repository (code, docs, diagrams) to enable context-aware and token-efficient analysis.
- Integrated GitHub webhooks to trigger real-time PR analysis and enabled maintainers to define custom rules and validation checks tailored to project requirements.

**Agentic Shopping Assistant** | *LangGraph, Claude API, Tavily Search API, Streamlit*

- Developed an autonomous shopping agent using LangGraph and Claude API that parses natural language purchase requirements and independently searches, compares, and recommends products.
- Implemented a 5-agent pipeline (Parser → Searcher → Comparator → Review Analyzer → Recommender) with iterative re-search when results were insufficient.
- Integrated Tavily Search API for real-time product discovery across multiple sources with automated spec extraction and price comparison.

**AI-Powered Knowledge Engine for Support & Categorization** | *FAISS, FastAPI, LLaMA*

- Built a machine-learning system that analyzes support tickets, cleans and preprocesses text, and generates semantic embeddings to recommend the most relevant knowledge-base articles in real time.
- Used FAISS vector search and a FastAPI backend; included automated daily Slack alerts for performance monitoring and coverage reporting.

**News-Sentiment Analyser** | *NLP, Machine Learning, Python*

- Web-based application that leverages NLP and machine learning to analyze news articles and classify their sentiment (positive, negative, neutral).
- Provided users with insightful dashboards for trend monitoring.

## Certifications

**AI Engineer Core Track: LLM Engineering, RAG, QLoRA and Agents** | *Udemy*

**January 2026**

**Complete Data Science, Machine Learning and NLP Bootcamp** | *Udemy*

**April 2025**

## Achievements

Achieved 1st Place at InoQuest 2025, recognized for delivering the best mini project implementation.

Participated in 5+ Hackathons, collaborating in team-based problem solving and rapid prototyping.
